2026 JULY HACKATHON

ACCELERATE THE POSSIBLE

OPPPORTUNITIES TO INNOVATE
WORKSHOP: **16 JUNE**

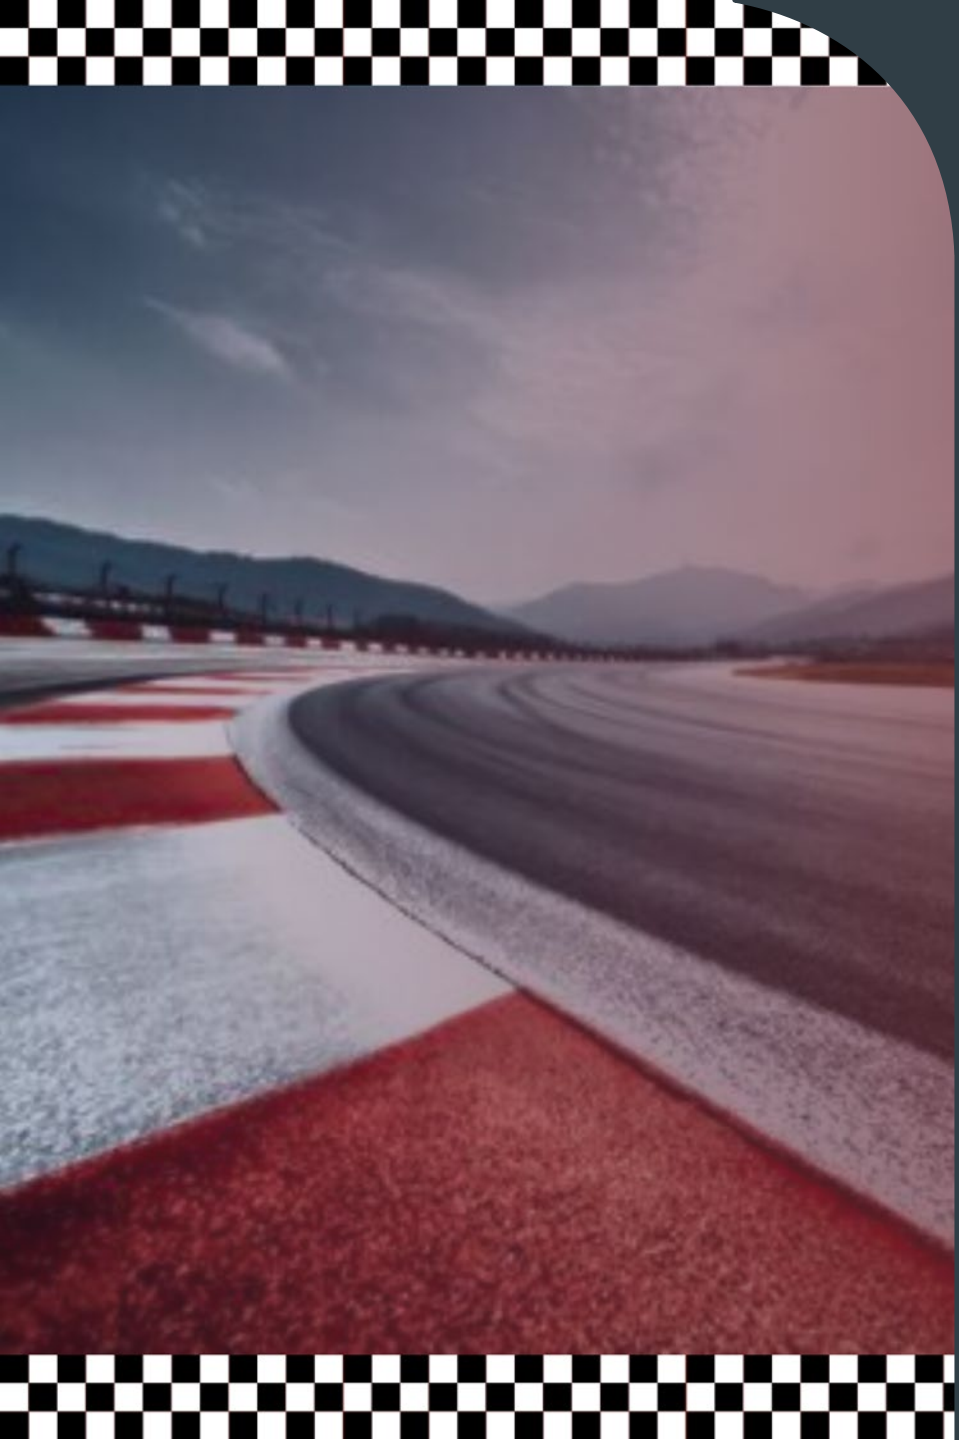
Hosted by:

TAL / Tech Academy / OpenAI

Welcome

Serena Lo
Tech Academy Lead

Acknowledgement of Country



Agenda

01 Welcome

02 Unpack and Define Opportunities

03 Codex Overview & Examples

04 What to Expect

05 Team Breakout Session

06 Closure & Next Steps

Opportunity Area 1

Samuel Scarpino
Senior Digital Marketing Manager – Customer Experience & Growth

TAL / Tech Academy / OpenAI

CHALLENGE FOCUS AREA

How might TAL Consumer use technology to increase the number of sales through insurance representatives without requiring additional costs?

Context

1. TAL received ~106k contact centre leads in FY25, mostly from Coverbuilder.
2. Customers typically complete a 30–45 min quote call and a 60–90 min application call, with additional follow-ups during underwriting.
3. While this model delivers higher-value outcomes, scaling it 3x would significantly increase costs due to its reliance on human support.

Problem Areas

1. **Time-heavy experience**
   - 30–45 min quote call + 60–90 min application call
2. **Rigid, agent-led process**
   - Customers must follow structured calls
   - Limited ability to self-serve or complete in their own time (unless STP)
3. **High compliance + scripting requirements**
   - 100% of requirements delivered verbally (excluding STP)
   - Extensive mandatory scripting across multiple stages

Why this is a problem

- Slows down customer conversion
- Creates drop-off and frustration
- Limits scalability (requires more staff to grow)

What's the difference between contact centre sale and an online sale?

1. Most sales in TAL C are from the contact centre

FY25: **69%** contact centre vs. **31%** online

2. More benefits are selected from the contact centre

FY25: **1.75 benefits per policy** contact centre vs. **1.48 benefits per policy** online

3. Higher sums insured are select from the contact centre

FY25: **$561k avg sum insured** contact centre vs. **$476k avg sum insured** online

4. Policy average API is higher from the contact centre

FY25: **$1,701 avg API** contact centre vs. **$1,077 avg API** online

"What are customers saying?"

- *I understand the underwriting process, however this 60/90min appointment... reading out loud ... was particularly painful. I would have preferred answering... online, then review on the phone*
- *But then getting passed on to another person and having to try to set up another appointment to set up the policy, and then having to wait for it to be approved... just feels all overly complicated and creating extra barriers.*
- *Having to wait for the doctors reports to be sent was stressful cos it took so long*
- *The underwriting process was very poorly communicated and the progress updates during this stage was not good.*
- *The documents on the website were all lumped together and it was difficult to find what specifically I was looking for. Also, the file names didn't quite exactly match what was on the website.*

Opportunity for you to solve...

How might we make the **process** of getting life insurance feel as **manageable and low-stress** as possible, even for complex applications?

How might we **replicate** the higher cover, benefits, and API outcomes of contact centre sales in a **more scalable** way?

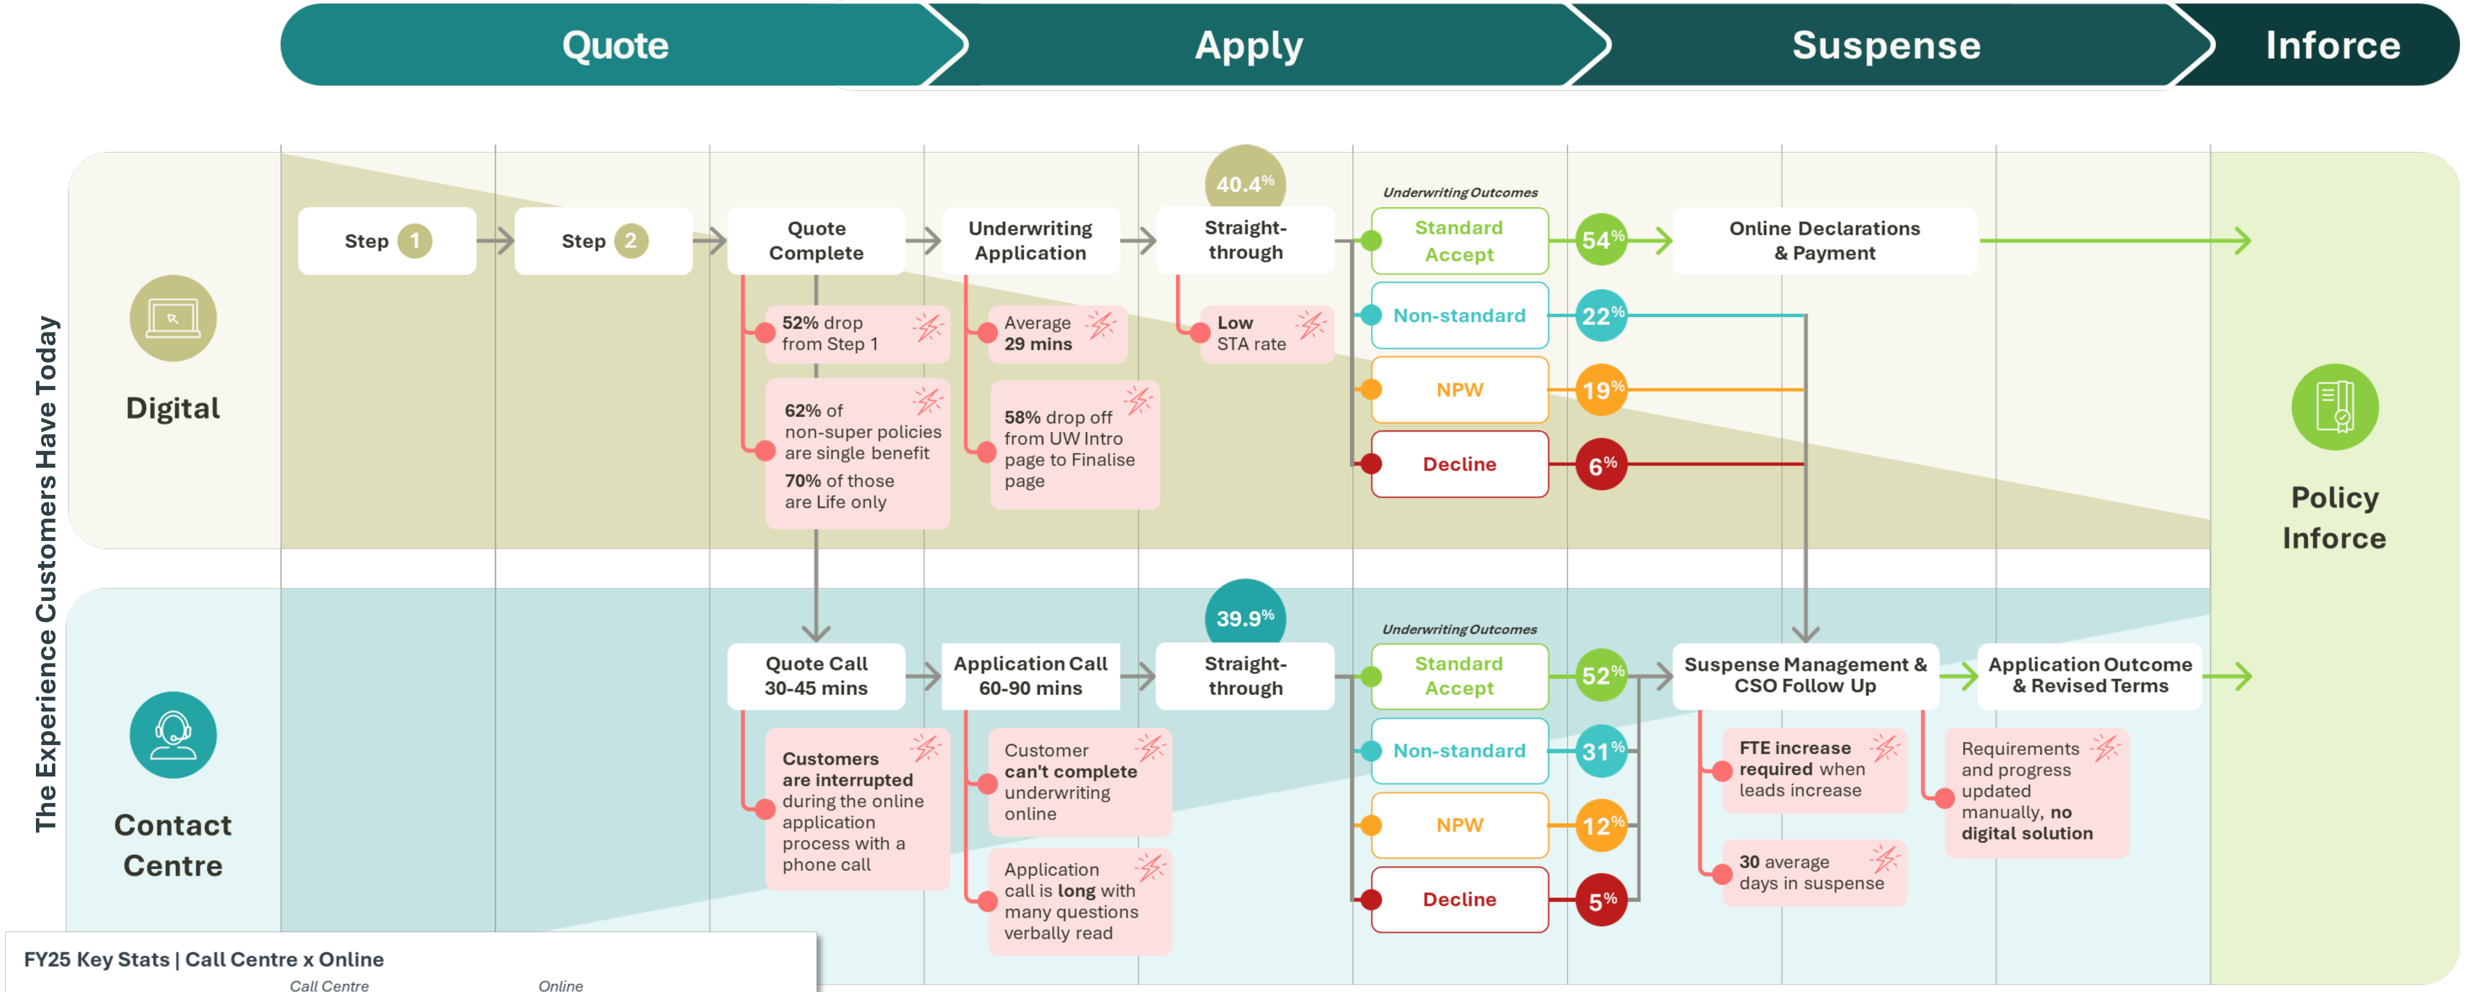
How might we shift the **application workload** away from calls and into a more **efficient, customer-led experience**?

How might we **help customers** get the right life insurance cover without it taking over their week, while still giving them the **confidence** that comes from **expert guidance?**

TAL / Tech Academy / OpenAI

TAL Consumer ♦ A high-friction, call-heavy process that doesn't scale

TAL Consumer's Direct business has significant growth ambitions, but scaling leads and portfolio growth has historically required growing headcount and overhead costs alongside it. How might technology break that relationship – enabling more sales through insurance representatives without a proportional increase in cost?



Note: Underwriting % are Life rolling 12m based on Feb report

FY25 Key Stats | Call Centre x Online

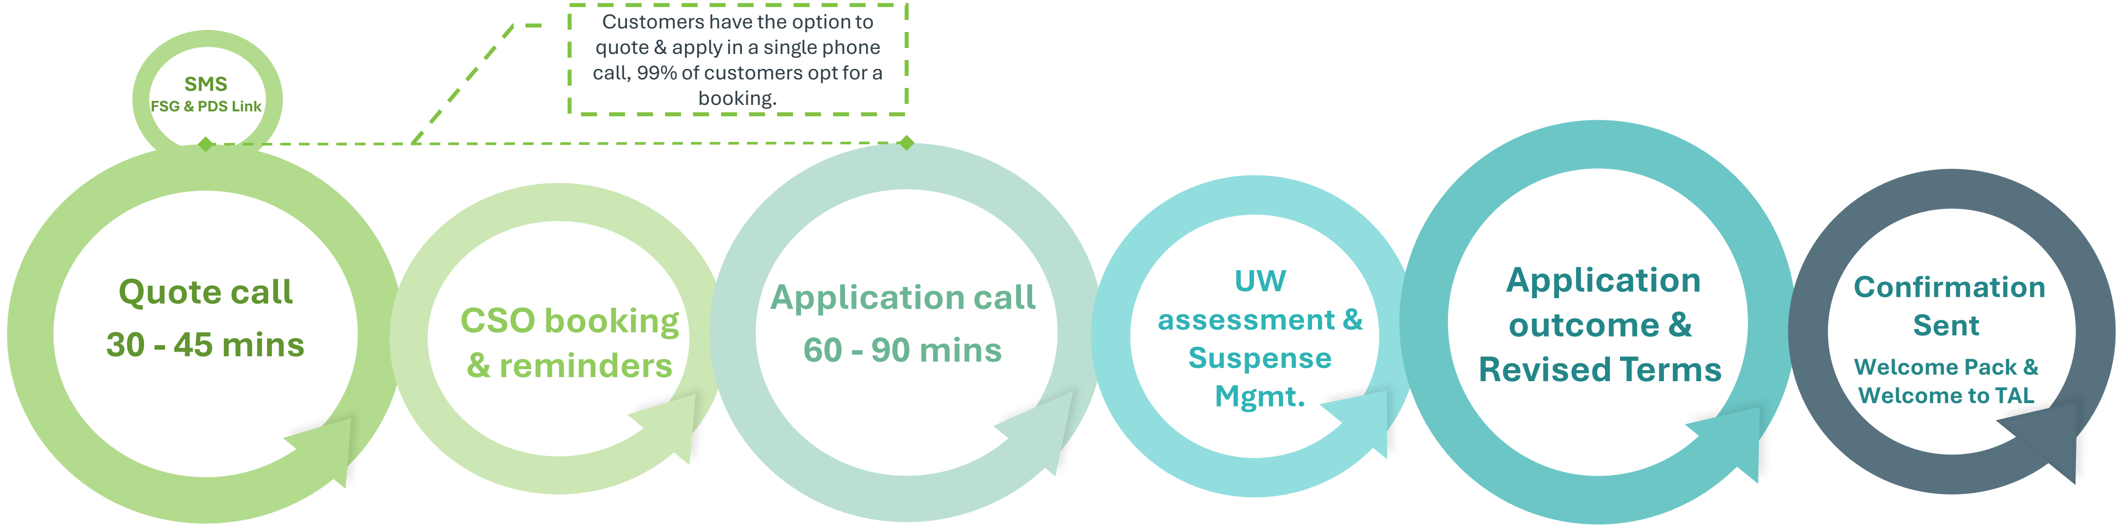
	Call Centre	Online	
API	5.8%	3.0%	$13.18m
Conversion Rate	$10.31M	$2.86M	8.5%
Policy Count	6237	2835	9,072

TAL / Tech Academy / OpenAI

TAL Consumer ♦ The contact centre experience

Customers are required to navigate long, structured calls to complete their application, which can feel repetitive and cumbersome. This limits their ability to engage on their terms and slows the overall experience. A more flexible, digitally enabled journey would reduce friction while still preserving access to expert advice.

Customer Journey



100% of requirements are provided to the customer on the phone through mandatory scripting.

Mandatory Scripting

Quote call 30-45mins

All Policy Types

- Call recording
- General Advice Warning
- Privacy Policy
- FSG & PDS (SMS)
- Product Features & Benefits
- Product Exclusions
- Benefit & Product Options
- Consent to proceed
- Welcome RVA – T&C's

Superannuation Policy

To be read in addition to 'All Policy Types'

- General Advice Warning – Super specific
- Consider the PDS Warning – Super specific
- Fund Type, Rollover & Fees Warning
- Policy Ownership Information Script
- Available Benefits/ Distribution Definitions
- Product Replacement Warning
- Benefit Distribution & Superannuation Accrual
- Retirement Savings Erosion Warning
- Reminder General Advice Warning
- Consent to proceed

Application call 60-90mis

- Call recording
- General Advice Warning
- Quote & PDS Confirmation
- Duty to take reasonable care
- Cooling-off period
- TFN Disclosure
- Post Application Declaration
- Consent to proceed
- Medical Consent Authority
- Payment Declaration

Revised Terms call

- Call recording
- General Advice Warning
- Alternative Terms or Decline Script
- Confirmation of Acceptance to proceed
- Consent to proceed (Alternate Terms)
- Duty to Take Reasonable Care

Opportunity Area 2

Ciaran Hennessy

Technology Program Manager – Cloud Modernisation

TAL / Tech Academy / OpenAI

HACKATHON 2026

Risk that keeps up. Finally.

Your brief starts here.

THE ESTATE

One organisation. Four technology layers. All need governing.

Mainframe & Core
Decades old. Still running.

On-Premise Apps
Established. Familiar.

Cloud Workloads
Migrating now.

AI & New Tech
Arriving fast.

🚨 **All of it needs governing. All of it. Right now the coverage is inconsistent.**

THE PROBLEM

Currently? More complexity = more humans. That can't scale.

01

Controls go stale the moment you write them

New platform? New workload? New AI tool? The control framework is already behind. Someone has to catch up manually — always.

02

Every new environment = more spreadsheets

There's no lever that says 'double the complexity, same effort'. Right now the only answer is more people and more hours.

03

Ask 3 teams what the risk picture is. Get 3 answers.

No single consistent view across the estate. Especially painful as legacy and cloud run side by side through the transition.

HOW MIGHT WE...

...build a risk capability that scales effortlessly across TAL's entire technology estate — without scaling the manual effort alongside it?

⚡ Legacy + Cloud

🤖 Automated not manual

📊 One risk view

SOME CONTEXT

The Modernisation Program is the spark.

Your solution should be bigger.

- ~93 controls mostly anchored to on-prem
- Legacy + cloud running in parallel through FY27
- AI workloads arriving with no control equivalent
- Program closes — BAU must own risk before it does

The bigger play

- Risk visibility across the FULL estate — not just what's migrating
- Controls that update automatically as technology changes
- A view that works for Technology, Risk, and the business
- A model that handles 2× the complexity with the same team

WHAT GREAT LOOKS LIKE

The bar. Don't build below it.

Estate-wide

Covers mainframe, on-prem, cloud, AI. All of it.

Automated

Monitors continuously. Not periodic. Not manual.

Scalable

10 systems or 500. Same effort. That's the brief.

Signal-driven

Real risk indicators. Not activity. APRA-aligned.

Practical

Real teams. Real platforms. No unicorns required.

Surprising

We haven't thought of it yet. That's why you're here.

Now go build something incredible.

Questions? Ask now. Then sprint. 🚀

Codex Overview & Examples

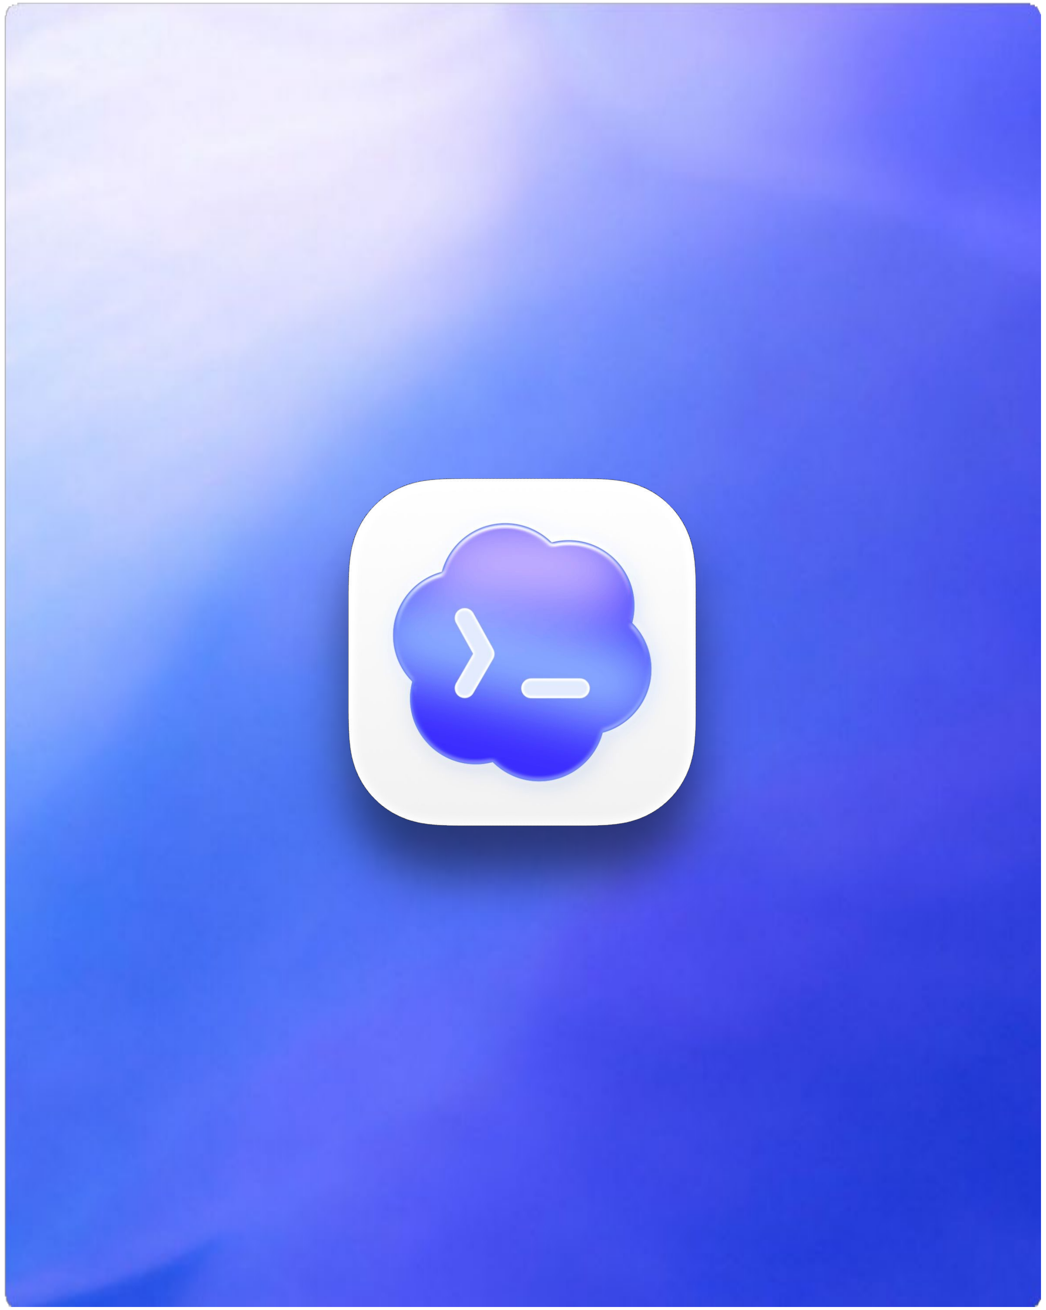
Tyler Ryu
OpenAI

TAL / Tech Academy / OpenAI

OpenAI

TAL x OpenAI

Opportunities to Innovate Workshop
Codex overview, live demo & hackathon prep
16 June 2026



Tyler Ryu

AI Deployment Engineering

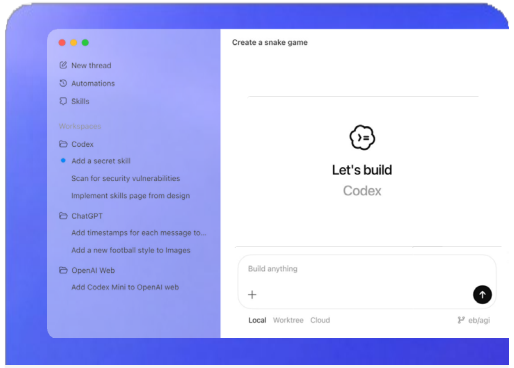
Session overview

→ **Goals**
- Understand what Codex is and where it fits
- See Codex complete a real task and prepare for 9 July

→ **Format**
- Quick Codex concepts
- Live Codex demonstration
- How to delegate effectively
- Judging criteria and awards

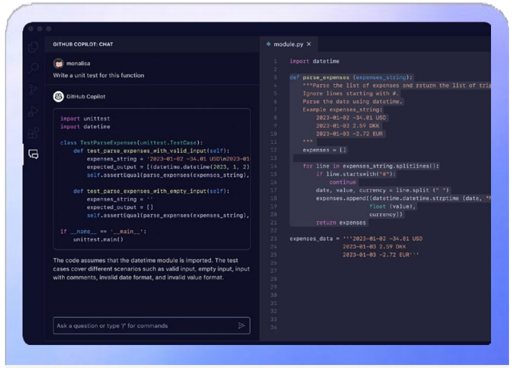
→ Use the TAL pilot environment and the Codex surface that best fits your workflow. We recommend starting with the Codex App.

The role AI plays in software development is changing



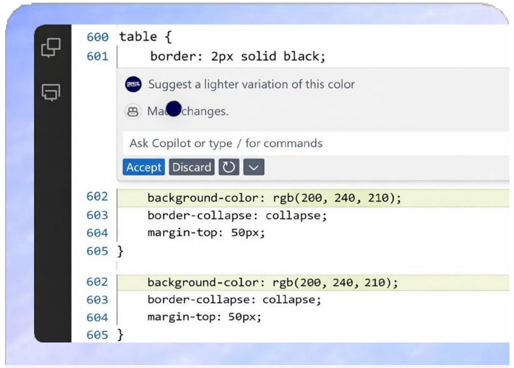
Phase 3
Agentic delegation

Delegate entire task



Phase 2
Pair programming

Chat while coding



Phase 1
Code complete

Suggest the next line

3

Developer productivity

One Agent, Everywhere you Work

CLI

- Original & Popular UI
- Zero-Dependency Install
- Powerful Slash Commands (/compact /fork /new)
- Integration with ChatGPT Apps

Codex App

- Easily run tasks in parallel across multiple workspaces
- Better/more flexible diff views
- Excellent visual surface for skills, worktrees & automations
- Great UI for workflows beyond writing code

IDEs

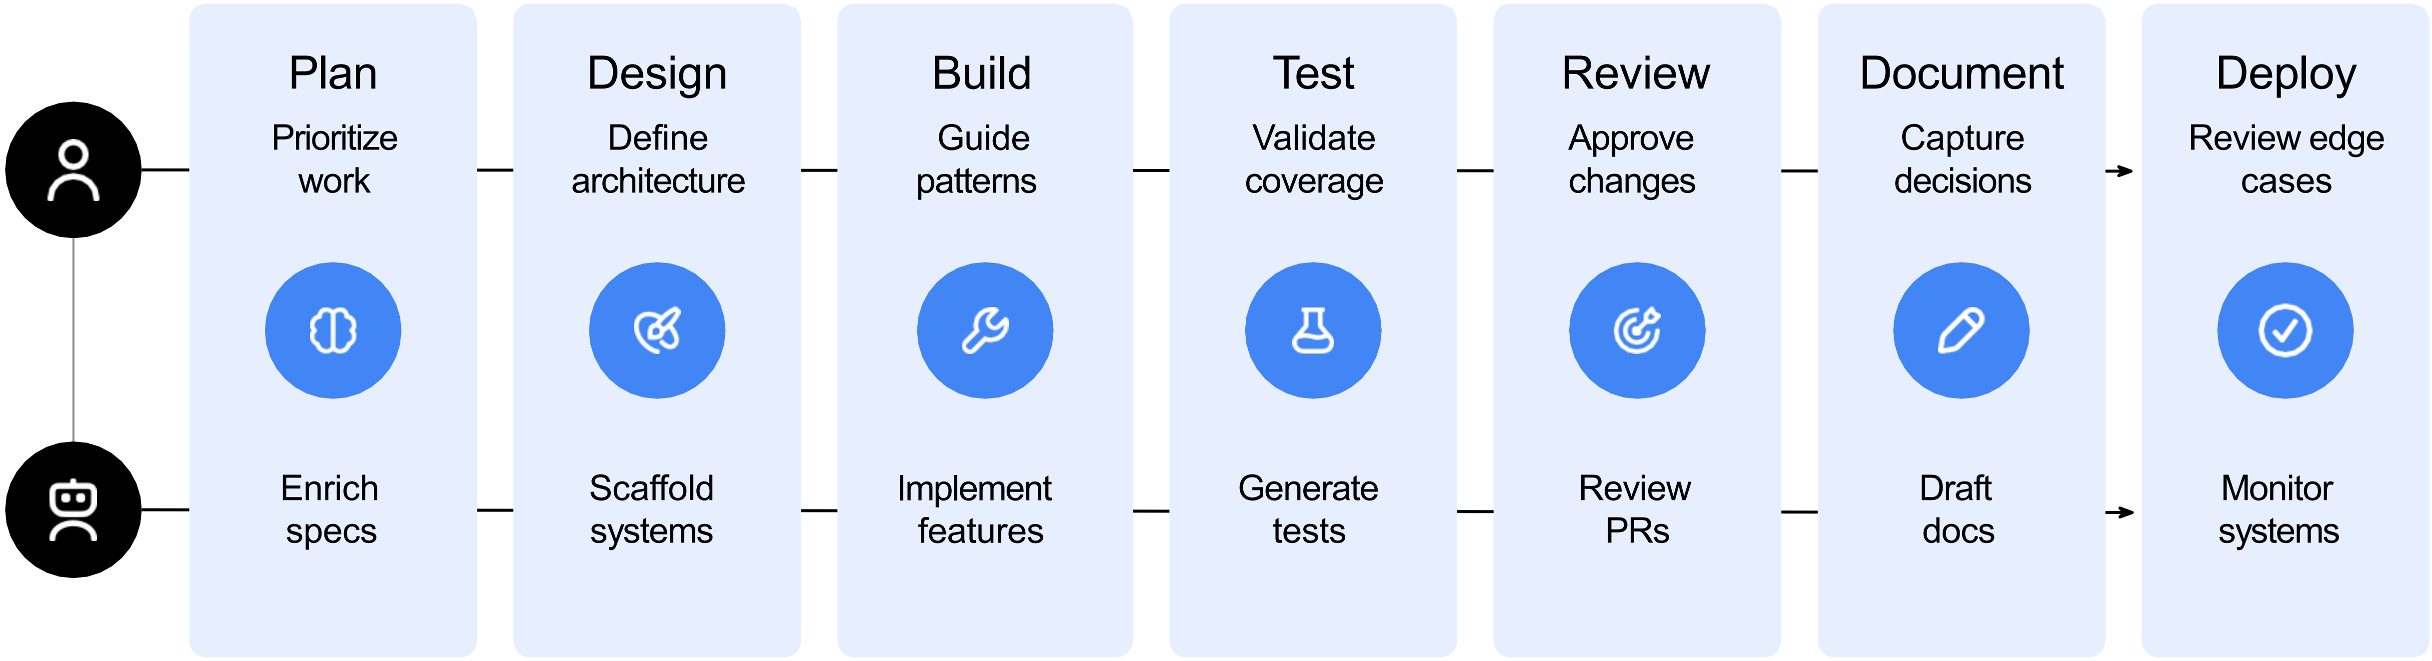
(VS Code, JetBrains, Xcode)

- Fits naturally into IDE-based workflows
- Good for incremental tasks, quick assistance
- Great for 'chat-style' usage

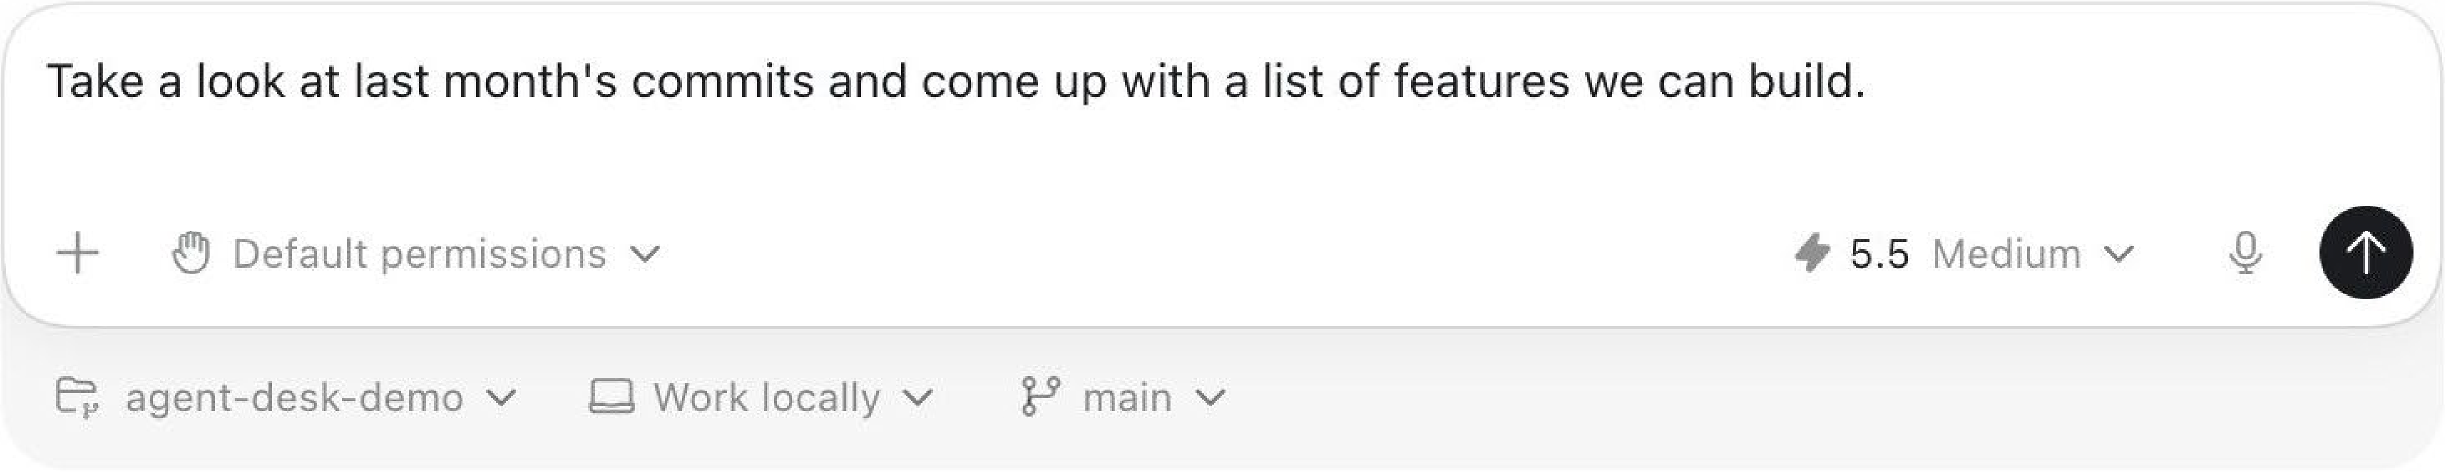
The new way of shipping software

Engineers make critical decisions

Agents execute



Live demo: delegate a real task



6

Mini Codex prompt template

Four fields that keep work scoped, reviewable, and repeatable

Goal

The outcome you want, what you are changing, and why it matters

Context Pointers

Relevant files or any examples of desired behavior or existing patterns

Constraints

Do and do not rules, conventions, and style expectations

Done When

Tests and checks to pass, commands to run, and expected behavior verified

What To Expect

Meet the judges, the judging criteria and the award categories

Judges

Sajeewa Arachchillage

General Manager – Platform Delivery & Engineering, TAL

Tyler Ryu

AI Deployment Engineer, OpenAI

James Bagley

Director of Consumer Acquisition, TAL

TAL / Tech Academy / OpenAI

Judging Criteria

Every team is scored against the same weighted rubric.

Each pitch will be scored across 5 essential criteria on a scale from 0-5.

Maximum total score: 25 points

Ties break on Business Impact, then Effective Use of Codex

Challenge focus area relevance & business value – 25%
Clear TAL challenge focus area, identifiable users, and meaningful measurable value

Solution & prototype quality – 25%
Core workflow works end to end, backed by credible evidence

Effective use of Codex – 20%
Uses context, tools, iteration, and verification - not superficial generation

Feasibility & responsible use – 15%
Considers data boundaries, security, ownership, constraints, and a credible next step

Pitch & demo clarity – 15%
Explains the problem, solution, Codex workflow, evidence, and next step

Hackathon Award Categories

Grand Champion

Strongest end-to-end submission

Highest final weighted score

Best Business Impact

Clearest measurable TAL value

Highest Business Impact score

Best Use of Codex

Strongest agentic workflow

Context, tools, iteration, verification

People's Choice

Participant-voted favourite

Usefulness, creativity, and demo resonance

Team Breakout Session

Shape your idea, intended users, expected value and what you will build on the Hackathon & Pitch Day.

TAL / Tech Academy / OpenAI

Closure & Next Steps

Serena Lo
Tech Academy Lead

To Complete: Register By 25th June

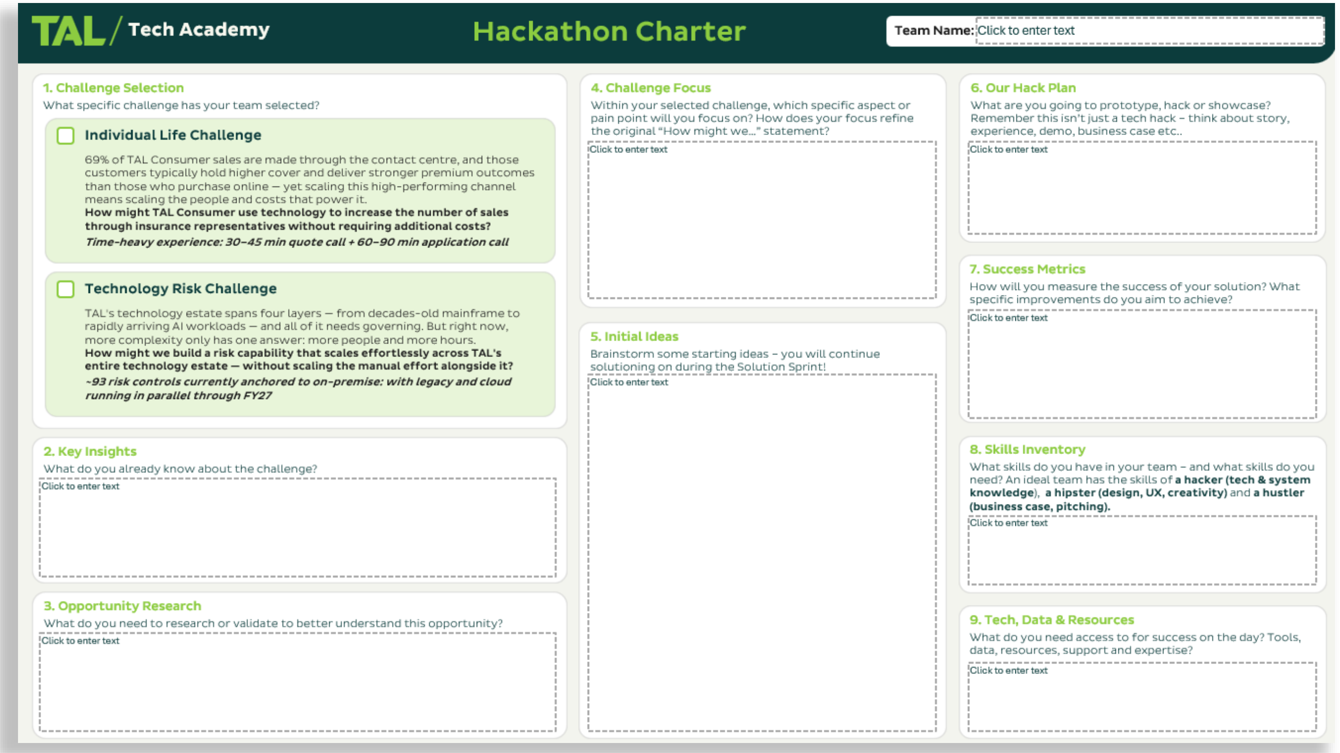
Team Registration (2-4 people):
https://forms.cloud.microsoft/r/4a0MMPM7JP

Individual Registration:
https://forms.office.com/r/3G4sXDVJmC

Before 9th July:

1) Bring a clear challenge focus area and working materials
2) Define success and how you'll verify it

Outcome we want teams working towards on 9 July: build one reliable end-to-end workflow.



TAL / Tech Academy

Hackathon Charter

Team Name: Click to enter text

1. Challenge Selection
What specific challenge has your team selected?

☐ **Individual Life Challenge**

69% of TAL Consumer sales are made through the contact centre, and those customers typically hold higher cover and deliver stronger premium outcomes than those who purchase online – yet scaling this high-performing channel means scaling the people and costs that power it.
How might TAL Consumer use technology to increase the number of sales through insurance representatives without requiring additional costs?
Time-heavy experience: 30–45 min quote call + 60–90 min application call

☐ **Technology Risk Challenge**

TAL's technology estate spans four layers – from decades-old mainframe to rapidly arriving AI workloads – and all of it needs governing. But right now, more complexity only has one answer: more people and more hours.
How might we build a risk capability that scales effortlessly across TAL's entire technology estate – without scaling the manual effort alongside it?
~93 risk controls currently anchored to on-premise: with legacy and cloud running in parallel through FY27

2. Key Insights
What do you already know about the challenge?
Click to enter text

3. Opportunity Research
What do you need to research or validate to better understand this opportunity?
Click to enter text

4. Challenge Focus
Within your selected challenge, which specific aspect or pain point will you focus on? How does your focus refine the original "How might we…" statement?
Click to enter text

5. Initial Ideas
Brainstorm some starting ideas – you will continue solutioning on during the Solution Sprint!
Click to enter text

6. Our Hack Plan
What are you going to prototype, hack or showcase? Remember this isn't just a tech hack – think about story, experience, demo, business case etc..
Click to enter text

7. Success Metrics
How will you measure the success of your solution? What specific improvements do you aim to achieve?
Click to enter text

8. Skills Inventory
What skills do you have in your team – and what skills do you need? An ideal team has the skills of **a hacker (tech & system knowledge)**, **a hipster (design, UX, creativity)** and **a hustler (business case, pitching).**
Click to enter text

9. Tech, Data & Resources
What do you need access to for success on the day? Tools, data, resources, support and expertise?
Click to enter text

2026 JULY HACKATHON

ACCELERATE THE POSSIBLE

OPPPORTUNITIES TO INNOVATE
WORKSHOP: **16 JUNE**

Hosted by:

TAL / Tech Academy / OpenAI
