

AI-First Assisted Digital Journey – 4 Hour Hackathon Plan

Core Principle: AI engages first when friction is detected. Representatives are only involved when AI assistance is insufficient.

Target Story

Customer starts application → Friction detected → AI proactively helps → Customer continues digitally → Rep engaged only if required.

Must-Have Journey

- Quote
- Medical History (primary friction point)
- Declaration

Primary Friction Signals

- On page for more than 3 minutes
- Multiple answer changes
- Multiple help requests
- Save and exit

AI Intervention (Main Feature)

When friction score reaches threshold, display proactive popup:

“Looks like this question may be causing some uncertainty. I can help.”

Buttons:

- Explain this question
- Give examples
- Ask a question

Mock AI Responses

Explain:

“We ask this question to understand whether any medical conditions may affect policy terms.”

Reassure:

“If you are unsure of exact dates, an approximate answer is acceptable for this prototype.”

Next Step:

“You are close to completing this section. Most customers finish this step within a few minutes.”

Escalation Rules

Escalate only when:

- Friction score > 80
- AI guidance used multiple times
- Customer explicitly requests help

Rep Dashboard (Secondary Feature)

Show only escalated customers:

- Customer Name
- Current Stage
- Friction Score
- Questions Asked
- Recommended Action

Generate AI handoff summary automatically.

4 Hour Schedule

Hour 1:

- Build Quote, Medical History, Declaration screens
- Create mock customer state

Hour 2:

- Implement friction engine
- Trigger proactive AI popup

Hour 3:

- Build mock AI responses
- Add escalation logic and handoff summary

Hour 4:

- Build rep dashboard
- Demo polish and rehearsals

3 Minute Demo

1. Customer reaches Medical History question
2. Customer struggles and edits answers repeatedly
3. AI detects friction and proactively offers help
4. Customer receives explanation and reassurance
5. If still struggling, AI escalates to representative
6. Rep receives concise summary and recommended action
7. Customer completes digitally

Winning Message

AI handles routine uncertainty automatically. Representatives focus only on high-value interventions.
